PROFESSIONAL SUMMARY

Cybersecurity-focused professional with hands-on SOC experience across SIEM monitoring, log analysis, threat detection, and incident response training. Built and investigated Wazuh SIEM environments, analyzed Windows Event Logs for Event IDs 4624 and 4625, investigated network traffic with Wireshark, and developed Python and PowerShell tools for security automation and log analysis. Completed practical security projects and ongoing incident response training focused on simulated attack scenarios, forensic evidence handling, and SOC operations.

PRACTICAL TRAINING

Digital Egypt Pioneers Initiative (DEPI) | *Cyber Security Incident Response Trainee* | Egypt Jan 2026 – Present

- Completed 200+ hours of hands-on training covering network fundamentals, operating system security, threat analysis, DFIR, and SOC operations.
- Performed log analysis and alert triage across Windows and Linux endpoints, identifying suspicious authentication patterns and configuration anomalies.
- Used local LLMs (Ollama) to assist with SOC triage documentation and incident report drafting during lab exercises.
- Practiced forensic evidence collection, preservation, and documentation during simulated incident investigations.
- Collaborated with a team of 5 on a capstone project simulating an end-to-end attack and incident response scenario.

HANDS-ON PROJECTS

VanguardSOC – Custom SIEM & Threat Detection Platform | *Technologies: Python, FastAPI, PostgreSQL, Docker, Prometheus, Grafana, JWT, GitHub Actions* | [GitHub](#)

- Developed a lightweight SIEM pipeline using FastAPI to ingest and regex-parse raw SSH/Nginx logs into structured events, enabling custom correlation rules for real-time detection of brute-force and privilege-escalation activity.
- Built a secure, containerized architecture with Docker Compose, PostgreSQL, Nginx, Prometheus, and Grafana, using JWT authentication to enforce Role-Based Access Control (RBAC) across the platform.
- Automated testing, linting, and Docker builds through a GitHub Actions CI/CD pipeline, while the web console and RESTful dashboard APIs presented security insights for investigation and review.

SentinelPulse – SOC Analytics Pipeline | *Technologies: Python, YAML, MITRE ATT&CK, AbuseIPDB, NIST SP 800-61* | [GitHub](#)

- Developed a Python-based SOC pipeline that parses raw Syslog/Apache logs into structured JSON and evaluates events against 15+ MITRE ATT&CK-mapped detection rules for structured alert analysis.
- Built a sliding-window algorithm for brute-force detection based on attack density and integrated AbuseIPDB for IP reputation enrichment and IOC matching during triage.
- Aligned alert triage and response workflows with NIST SP 800-61 incident response playbooks to provide a clear path from detection through response documentation.

Vigilant-IOC | *Python, Oletools, PyMuPDF, VirusTotal/AbuseIPDB APIs, pytest* | [GitHub](#)

- Developed a CLI static analysis tool that safely extracts Indicators of Compromise (IOCs) from PDF, Office, and RTF files without executing payloads, supporting faster malware triage.
- Added heuristic checks for malicious VBA macros, C2 IPs, and obfuscated URLs, generating a 0–100 risk score to help prioritize malware triage.
- Integrated VirusTotal and AbuseIPDB APIs for threat intelligence enrichment and produced structured SOC-ready reports in JSON, CSV, and HTML formats.
- Added multi-threaded directory scanning and used unit and integration testing with pytest to support reliable IOC analysis across target files.

TECHNICAL SKILLS

- Security Operations & Incident Response:** Alert Triage, SIEM Monitoring (Wazuh), Log Analysis, Windows Event Logs, IOC Identification, Incident Documentation, Basic Incident Response, Threat Detection, Security Monitoring, Forensic Evidence Handling
- Network Security:** TCP/IP, DNS, HTTP/HTTPS, ICMP, Subnetting, VLANs, Inter-VLAN Routing, ACLs, Network Traffic Analysis, Wireshark Packet Analysis
- Security Tools:** Wazuh SIEM, Wireshark, Cisco Packet Tracer, Git, GitHub, Ollama
- Operating Systems:** Windows Security & Authentication, Linux CLI, File Permissions, Process Management, Syslog Analysis
- Scripting & Automation:** Python (Regex, Log Parsing, CSV/JSON Automation), PowerShell, Bash
- Frameworks & Concepts:** MITRE ATT&CK Basics, Cyber Kill Chain, Defense in Depth, SOC Tier 1 Operations

EDUCATION

Bachelor of Artificial Intelligence — Bio-AI Program
Kafr El-Sheikh University, Faculty of Artificial Intelligence

2024 – Present

CERTIFICATIONS & COURSES

- Certified Cybersecurity Educator Professional (CCEP) — Red Team Leaders | 2026
- Networking Essentials — Cisco Networking Academy | 2026
- Web Fundamentals (Legacy) — TryHackMe | 2026
- Cyber Security Engineer Job Profile — Mahara-Tech / ITI | 2025
- Data Communication and Network Technology — Huawei | 2025
- ISC2 Certified in Cybersecurity (CC) Preparation | 2025

LANGUAGES

- Arabic:** Native | **English:** Very Good
